Reset register	These selections are for resetting 5-stage and the busy circuit after 1/2 <sup>5</sup> frequency stage. Resetting is activated by latching this code on to the address latch and setting WRITE=H																									
Standard signal register	By latching this code to the address latch and setting READ to H, the standard signals will be output at D <sub>0</sub> to D <sub>3</sub>																									

- Note:
- Do not enter erroneous data for clock.
  - This may result in time keeping error.
  - Do not change STOP more than once while in BUSY mode.
